Subject: WEB

Changelog

Part 1:

1. Created the five main website pages: Home, About, Menu, Enquiry and Contact.
2. Added consistent navigation links between all website pages.
3. Added the The Daily Grind Café logo and favicon.
4. Added the café's mission and vision to the About page.
5. Added menu categories and menu items with prices.
6. Added an enquiry form for customers.
7. Added contact information, opening hours and a Google Maps location.

Part 2:

1. Created an external CSS stylesheet and linked it to all HTML pages.
2. Added a CSS reset and consistent base styling.
3. Added typography styling for headings, paragraphs and navigation.
4. Used Flexbox to create the desktop header and navigation layout.
5. Added colours, borders, rounded corners and box shadows to improve the visual design.
6. Added hover and focus effects for interactive elements.
7. Styled the enquiry form and contact information.
8. Added responsive styling using media queries for tablet and mobile screen sizes.
9. Added relative CSS units such as %, rem and em.
10. Added responsive image attributes using srcset and sizes.
11. Tested the website at desktop, tablet and mobile screen sizes.

CSS Styling and Responsive Design:

The Daily Grind Café website was styled using an external CSS stylesheet. The stylesheet was linked to all five HTML pages to maintain a consistent design throughout the website.

The website uses a warm café colour scheme with brown, cream and white colours. Typography was adjusted using different font sizes, font weights, line spacing and letter spacing to create a clear visual hierarchy.

Flexbox was used to arrange the header, café logo, website name and navigation links. Sections, buttons, forms and other content were also styled using padding, margins, borders, rounded corners and box shadows.

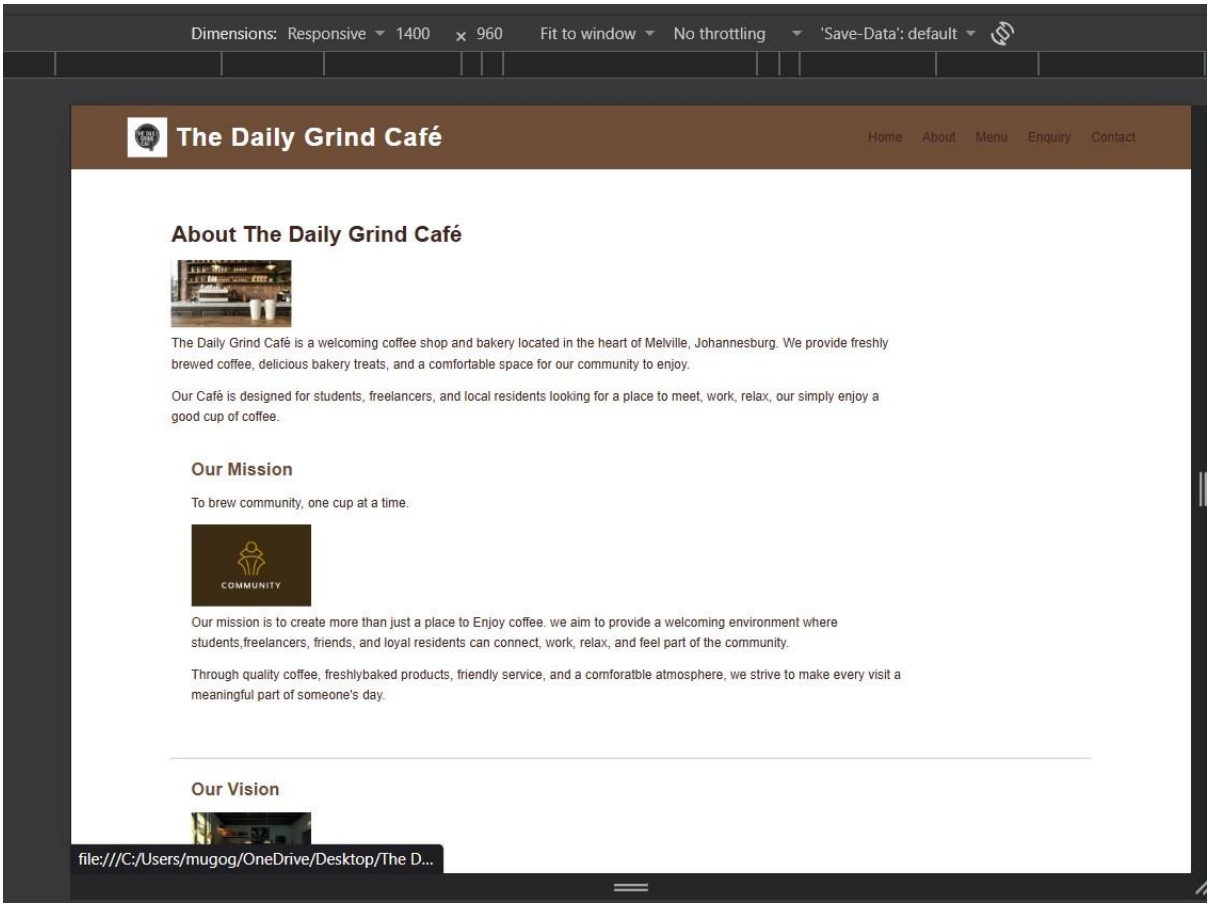

Responsive design was added using CSS media queries. The website was tested at desktop, tablet and mobile screen sizes. The navigation, text, buttons, forms and other content adjust to fit smaller screens.

Relative units such as percentages, rem and em were used to help the website adapt to different screen sizes. Responsive image attributes using srcset and sizes were also added.

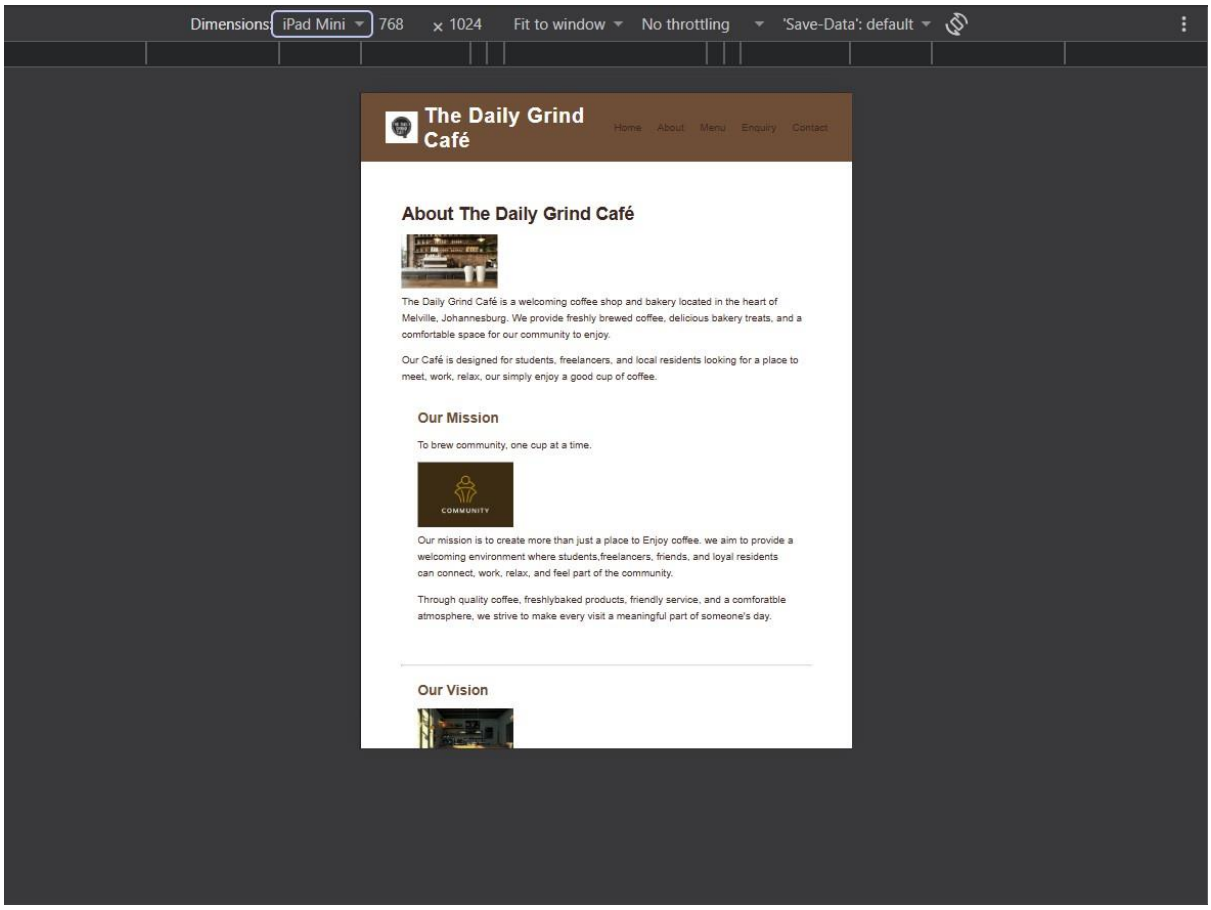

Testing Evidence:

The website was tested at the following screen sizes:

- Desktop: 1440px

- Tablet: 768px

Changelog Part 3: JavaScript Functionality, SEO and Website Improvements

- Added a JavaScript loading screen featuring the café logo.
- Added a menu search function to help customers find specific items.
- Added expandable menu sections with descriptions of menu items.
- Expanded the coffee and light meals menu with additional items and prices.
- Added a shopping cart to allow customers to add and remove menu items.
- Added quantity controls and automatic price calculations in the shopping cart.
- Added checkout functionality that prepares an order email.
- Added JavaScript validation to the enquiry form.
- Added JavaScript validation to the contact form.
- Added email functionality to prepare customer enquiries and contact messages.
- Added unique SEO page titles and meta descriptions to all five pages.
- Added meta keywords and improved heading structure.
- Added alternative text to website images to improve accessibility and SEO.
- Created a sitemap.xml file to help search engines discover website pages.
- Created a robots.txt file to provide search engine crawling instructions.
- Reviewed website responsiveness and image sizes to improve performance.

JavaScript Functionality and Interactive Features:

JavaScript was used to improve the functionality and interactivity of The Daily Grind Café website. A loading screen featuring the café logo was added to create a short, animated transition when visitors open the website.

The menu page includes a search function that allows customers to search for specific coffee and food items. Expandable menu sections were also added to display additional information about each product. A shopping cart was implemented to allow customers to add items, adjust quantities, remove products and view the total cost of their order. The checkout function prepares an email

containing the customer's order details.
JavaScript validation was added to both the enquiry and contact forms to check that customers enter the required information correctly. After successful validation, the website prepares an email containing the submitted information.

Search Engine Optimisation (SEO):
Search Engine Optimisation (SEO) improvements were made to help search engines understand the content of The Daily Grind Café website. Unique page titles, meta descriptions and keywords were added to all five HTML pages. Headings were organised to make the website content easier to understand, while alternative text was added to images to improve accessibility.
A sitemap.xml file was created to list the website pages, and a robots.txt file was added to provide instructions to search engine crawlers. The website also includes relevant café information, such as its location in Melville, Johannesburg, contact details and opening hours, to support local search visibility.
